

Capability Statement

Introduction

R & O Communications was founded in 1994 as an owner operator business incorporating only one person and one vehicle. In the 22 years since, R&O Communications has grown to now employ 21 staff members and has 11 service vehicles. It has built a reputation that has seen it become one of the leading and most respected suppliers and installers of telephone systems, data systems and communications solutions in South East Queensland. Our vehicle fleet is mine ready and equipped for outback travel. Vehicles carry a variety of stock on-board for most circumstances. We have completed projects in many areas of Australia, ranging from the Eastern Seaboard to the Queensland/Northern Territory border. Our team have also carried out projects in Victoria, Far North Qld, NSW, WA and the Northern Territory.

Our strength is in being able to design, implement and maintain solutions that are not straight out of the box. Although we can provide and install simple off the shelf services with ease, we have made a name for ourselves by providing solutions that other communication companies can or are not willing to look at.

Main Business Capabilities

- Solution design and implementation for all voice and data requirements
- Voice and data copper cabling up to Certified Cat6 & Cat6A
